(54) Title: LIGAND SCREENING AND DESIGN BY X-RAY CRYSTALLOGRAPHY

(57) Abstract

X-ray crystallography can be used to screen compounds that are not known ligands of a target biomolecule for their ability to bind the target biomolecule. The method includes obtaining a crystal of a target biomolecule; exposing the target biomolecule crytal to one or more test samples; and obtaining an X-ray crystal diffraction pattern to determine whether a ligand/receptor complex is formed. The target is exposed to the test samples by either co-crystallizing a biomolecule in the presence of one or more test samples or soaking the biomolecule crystal in a solution of one or more test samples. In another embodiment, structural information from ligand/receptor complexes are used to design ligands that bind tighter, that bind more specifically, that have better biological activity or that have better safety profile. A further embodiment of the invention comprises identifying or designing biologicallyactive moieties by the instant process. In a further embodiment, a biomolecule crystal having an easily accessible active site is formed by co-crystallizing the biomolecule with a degradable ligand and degrading the ligand.

INTERNATIONAL SEARCH REPORT

PCT/US 99/04967

Box I Observations where certain claims were found unsearchable (Continu	nation of item 1 of first sheet)						
This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:							
Claims Nos.: because they relate to subject matter not required to be searched by this Authority,	namely:						
Claims Nos.: because they relate to parts of the International Application that do not comply with an extent that no meaningful International Search can be carried out, specifically:	the prescribed requirements to such						
Claims Nos.: because they are dependent claims and are not drafted in accordance with the sec							
Box II Observations where unity of invention is lacking (Continuation of ite	em 2 of first sheet)						
This International Searching Authority found multiple inventions in this international applicat	ion, as follows:						
see additional sheet							
As all required additional search fees were timely paid by the applicant, this International searchable claims.							
2. X As all searchable claims could be searched without effort justifying an additional for any additional fee.	ee, this Authority did not invite payment						
As only some of the required additional search fees were timely paid by the application covers only those claims for which fees were paid, specifically claims Nos.:	cant, this International Search Report						
No required additional search fees were timely paid by the applicant. Consequer restricted to the invention first mentioned in the claims; it is covered by claims No.	ntly, this international Search Report is os.:
